JDE to Cloud Transformation: Phased Implementation for Global Manufacturing Firm

A global specialty chemicals manufacturing company, Chase Corporation moved from on-premises JDE software to Oracle Cloud ERP and SCM. This session presented by **Chase VP of Information Technology, Michael Vergato**, will cover the journey made from JD Edwards World to Oracle Cloud Applications. Topics will include the software selection process, the assessment process, the phased roadmap and implementation approach along with lessons learned.

Also covered will be how:

Chase Corporation reduced its reliance on multiple third-party systems, achieved tighter supply chain integration with heightened security, finally how it is using AI to help solve business problems while building a foundation for future technology initiatives.

PeopleSoft to Cloud HCM

Explore the tangible benefits of transitioning from PeopleSoft on-premise to Oracle Cloud, with tailored solutions designed specifically for PeopleSoft customers.

Whether you're exploring options or ready to start planning, this session offers a clear and practical understanding of what a successful cloud migration entails—from functionality and customization to ongoing support, configuration, and change management.

Gain valuable insights to help you:

- Understand the full scope of a cloud transition
- Evaluate customization, configuration, and support considerations
- Maximize your current PeopleSoft investment while planning ahead
- Take the first steps toward a future move to Oracle Cloud

Explore How Traditional & Generative AI embedded in Oracle CX Applications Boost & Transform Key Business Outcomes

Join Argano as we explore how Oracle CX applications (CPQ, Commerce, Subscription Management, Field Service, Sales & Service Cloud, and Incentive Compensation) can help your organization move forward faster and transform key business outcomes by optimizing various end-to-end processes.

Learn how to leverage advanced Machine Learning and AI capabilities to enable smarter decision-making in today's evolving environment.

In this session, we will focus on:

- The unique challenges around sales
- Customer service, B2B commerce
- Integrating with ERP (on-prem or cloud)
- A variety of other customer experience issues we've solved using Revenue Transformation and Service Automation strategies

Discover how Oracle Cloud EPM Improves Day-to-Day Business Activities by Equipping Users with Intelligent Performance Management (IPM) Capabilities

Explore how Oracle Cloud EPM enhances daily business operations by empowering users with Intelligent Performance Management (IPM) capabilities. This session follows a persona-driven journey to demonstrate how business users can uncover advanced insights, detect anomalies, and make faster, data-driven decisions using AI-powered tools like predictive analytics and pattern-based planning.

Learn how these capabilities:

- Help forecast trends
- Evaluate scenarios
- Optimize cash flow—transforming routine tasks into strategic opportunities that improve agility and overall business performance

Achieving Cloud Success: Your Strategic Roadmap to Unlocking Business Value

Migrating from legacy, on-premise systems to the cloud offers significant opportunities for cost savings, productivity improvements, and business growth—but realizing those benefits requires a clear, strategic approach.

This session introduces the Argano Cloud Blueprint, a structured framework designed to define the vision, scope, and objectives of your cloud transformation.

With guidance from Argano experts, you'll gain a detailed understanding of what the migration entails and how to effectively communicate its value across your organization.

The process also reveals potential savings and operational advantages, equipping you with a strategic plan to unlock the full potential of modern cloud solutions.
